## Quartz worktops

Quartz kitchen worktops are a modern and stylish option for many homeowners who want to enhance their kitchen design. Quartz is an engineered stone that is composed of ground quartz, resins and polymers to create a very solid and durable material. They are resistant to heat, scratches, stains and bacteria, making them easy to clean and maintain (Please refer to Care & Maintenance page). They are available in a wide range of colours and patterns, allowing you to match your worktops with your kitchen.

Quartz is a non-porous surface, durable, resilient, naturally anti-bacterial surface that is maintenance free.

It can be used in making tiles, kitchen worktops, bathroom countertops, wet room walls and many other applications.
